

Problem Statement:

Students at UofSC have been struggling to attend online classes, as meeting times are not as straightforward as a physical schedule would be. For example, Zoom does not include any notification system to remind students when meetings will begin, as students are forced to memorize codes and passwords each session, rather than entering them once and being able to press a button to instantly join a Zoom meeting again, making a schedule impossible. Meetings are also spread out over a multitude of different programs including Blackboard, Zoom, and even Discord. Our solution should keep everyone on track for classes by providing notifications for when and where your class will be.

Who is experiencing the problem?

Students at UofSC and other colleges

What is the problem?

Classes are so convoluted with meeting times and spread out that with digital meetings its difficult to keep track of them all. This leads to students forgetting to attend classes/missing classes because of the online system.

Where does the problem present itself?

The problem presents itself when students need to join a meeting online

Why does it matter?

This problem is important because students need to know when to join classes and meetings in order to get the content of the meeting/lecture
